

TEC-44

Unblockable motorized ball valve drain

PRODUCT FEATURES

The TEC-44 is a powerful timer controlled ball valve, designed to remove (heavy contaminated) condensate from deliquescent dryers, rusty old tanks, vessels and refrigerated dryers.

This condensate drain can not be blocked, due to its powerful ball valve rotation and large orifice, and is applied where all else fails. The TEC-44 is designed to remove heavy contaminated condensate up to pressure ratings of 600 PSI.

Draining applications with a high level of contamination (rust, scale etc.) require the TEC-44.

COMMERCIAL BENEFITS

- Suitable for all types of compressed air systems with high contamination levels (rust, scale)
- Impossible to block due to its powerful ball valve rotation
- Compressed air systems up to 600 PSI applications

TECHNICAL BENEFITS

- Large (full bore) 12 mm orifice, offering you a drain that cannot block
- Stainless steel ball valve
- Remote switch feature
- Does not air-lock during operation
- TEST (micro-switch) feature
- Micro-processor controlled (high level of time cycle accuracy)
